Aesthetic Plastic Surgery

RECORD OF JACKSON-PRATT OUTPUT

Call the doctor if any of the following occur:

- Fever (temperature greater than 38.0øC or 100øF)
- Significant redness of the skin where the tube comes out (a small amount of redness can be normal)
- Significant drainage from the skin around the tube site.
- Increased tenderness and swelling at the drain site.
- Cloudy, foul-smelling drainage.
- Increasing volume of drainage from the JP bulb for more than two days.

* Remember to bring your record of JP output to the doctor's office at your follow up appointment. The amount of output will decrease over time.

Date	Time Drain Emptied	Amount(s)	Total (24 Hours)
Example: 11/01/04		30cc, 15cc	45cc
